A. ABOUT THE CURRICULUM AND **ASSESSMENT PLANNER AND TRACKER**

1. Your quick guide to using this planner and tracker

What is the NECT and where do I fit in?

What you do matters! What you do every day as a teacher can change the life-chances of every child that you teach. The NECT supports teachers by providing CAPS planners and trackers so that teachers can plan to cover the curriculum, track progress, and seek help when they are falling behind.

But who will helpme?

The NECT will work with your school management team (SMT) and assist them to have supportive and professional conversations with you about curriculum coverage that will be orientated to identifying and solving problems.

I have looked at the planner and tracker. It goes too fast!

The CAPS planner and tracker is an expanded ATP. It helps you pace yourself as if you were able to cover everything in the ATP/CAPS. When you fall behind because time has been lost, or because the learners are progressing slowly, you need to confidently discuss this with your teaching team without feeling blamed. The pace of coverage will be determined by the pace of learning. That is why coverage must be tracked by the teacher and the SMT.

How do I use the planner and tracker?

See the "Quick 5-step Guide to Using the **CAPS Planners and Trackers**" on the opposite page.

QUICK 5-STEP GUIDE TO USING THE CAPS PLANNERS AND TRACKERS

- 1. Find the textbook that YOU are using.
- **2.** Use the planning page each week to plan your teaching for the week. It will help you link the CAPS content and skills to relevant material in the textbook, the teacher's guide, and other materials such as the DBE workbook.
- **3.** Keep a record of the date when you were able to complete the topic. It may be different from the date you planned, and for different classes. Write this date in the column on the right for your records.
- **4.** At the end of the week, reflect and check if you are up to date. Make notes in the blank space.
- **5.** Be ready to have a professional and supportive curriculum coverage conversation with your HoD (or subject or phase head).

The CAPS planners and trackers also provide guidelines for assessment with samples and may also have enrichment and remedial suggestions. Read the introduction pages carefully for a full explanation.

2. Purpose of the tracker

The Grade 7 Mathematics Curriculum and Assessment Planner and Tracker is a tool to support you in your role as a professional teacher. Its main purpose is to help you to keep pace with the time requirements and the content coverage of the CAPS. The tracker provides a programme of work which should be covered each day of the term and a space for reflection on work done. By following the programme in the tracker, you should cover the curriculum in the allocated time, and complete the formal assessment programme. By noting the date when each lesson is completed, you can see whether or not you are *on track* and if not, you can strategise with your head of department and peers as to how best to make up time to ensure that all the work for the term is completed. In addition, the tracker encourages you to reflect on what in your lessons is effective, and where content coverage could be strengthened. These reflections can be shared with colleagues. In this way, the tracker may encourage continuous improvement in practice. This tracker should be kept and filed at the end of the term.

3. Links to the CAPS

The Mathematics tracker for Grade 7 is based on the requirements prescribed by the Department of Basic Education's Curriculum and Assessment Policy Statement (CAPS) for Mathematics in the Senior Phase. The work set out for each day is linked directly to the topics and subtopics given in the CAPS, and the specified amount of time is allocated to each topic. The tracker gives the page number in the CAPS document of the topics and subtopics being addressed in each session to help you to refer to the curriculum document directly should you wish to.

4. Links to the approved sets of LTSMs

The tracker coordinates the CAPS requirements with the content set out in the approved Learner's Books and Teacher's Guides. There is a tracker for each of the Learner's Books on the list of approved books on the national catalogue. You must therefore refer to the tracker for the book that is used by learners at your school. If you have copies of other Learner's Books, you can of course refer to these too, for ideas for teaching the same content in a different way – but you must be sure to cover the content systematically. For each set of learning and teaching support materials (LTSMs), links are given to the relevant pages in both the Learner's Book and Teacher's Guide to make it easier for you to access the correct resources.

In a few instances, when necessary, we recommend that you should use only selected activities from the Learner's Book. This is when the recommended exercises have more work than can be done in the time allocated to the lesson. Exercises from which you should **select** examples are marked by the symbol (*) in the Learner's Book exercises (*LB ex.*) column in the tracker. In some instances the Learner's Books do not have adequate activities for learners to consolidate work done on a topic and in these cases we recommend that you supplement the recommended activities using the DBE worksheet given in the *DBE workbook* column or other resources. The symbol (#) is marked in the Learner's Book exercises (*LB ex.*) column in these cases. The symbols (*) and (#) are given in the heading for the weeks where we suggest you need to select or supplement activities.

The tracker uses the latest print editions of the eight approved Learner's Books. It is important to note that page numbers may differ slightly from other print runs of the same book. If the page numbers in your edition are not exactly the same as those given in the tracker you should use the activity/exercise numbers given in the tracker to guide you to the correct pages. These should only be a page or two different from those given in the tracker.

5. Links to the DBE workbooks

The tracker gives links to worksheets in the DBE workbook relevant to the content described for each day. The worksheets are referred to by worksheet number and page. They should be used in conjunction with the Learner's Book activities as mentioned above. You should review the suggested worksheets before each lesson and decide how best to use them – for teaching, revision, extension or for consolidation, in class or for homework.

Please note: The trackers refer to the 2021 edition of the DBE workbooks. The workbooks change very little from year to year and so the same pages are likely to be relevant in subsequent years. However, if you are using a different edition, you should check that the page being referred to is still appropriate for the work being done.

6. Managing time allocated in the tracker

The CAPS prescribes 4.5 hours of Mathematics per week in Grade 7. This tracker has provided work for 5×55 minute lessons in which the CAPS requirements will be covered each week. Each school will organise its timetable differently. For this

reason, you might have to divide the sessions in the programme slightly differently to accommodate the length of the lessons at your school. Depending on the pace at which your learners work, and how much support is needed, you might also have to supplement the set activities by using other resources to ensure that the full 4.5 hours for Mathematics is used constructively.

Please note that this tracker is based on a term of 9.5 weeks. Should you use it in a term that is longer or shorter than this, you will need to adjust the pace at which you work accordingly. It is important that you take note of this at the start of the term.

7. Sequence adherence

The content in each tracker has been carefully sequenced, and it is therefore important that lessons are not skipped. Should you miss a Mathematics lesson for any reason, or should you be going at a slower pace, you should continue the next day from where you last left off. Do not leave a lesson out to get back *on track*. You may need to speed up the pace of delivery to catch up the lesson. To do this you could cut out or cut back on some of the routine activities like mental Mathematics or homework reflection to save time until you are back *on track* for curriculum coverage.

8. Links to assessment

In **Term 1 of Grade 7**, the formal assessment programme specified by CAPS requires at least **one assignment** and **one test**. The approved Learner's Books and Teacher's Guides provide exemplar assignments and tests which you can use with your class. The assessment plan in Section C *Formal Assessment Term Plan* of this document, shows when in the programme of work they are included in each set of materials, and on which pages in the Learner's Books or Teacher's Guides they can be found. The tracker indicates where in the series of lessons the formal assessments are to be done and when feedback should be given. The actual tasks and the dates for the assessments vary slightly from Learner's Book to Learner's Book, but are always in line with the CAPS specifications. It is suggested that you discuss testing times with your colleagues teaching other subjects in order to avoid the learners having to write several tests on the same day in a single week.

You should use the assignment and test in your set of LTSMs with due diligence making sure that you personalise them and supplement them using other Learner's Books or ANA past papers and exemplars if necessary in order to be sure that they fulfil the requirements of the CAPS.

In Section E Assessment Resources we have provided a term test and marking memorandum which you could use instead of the test in the LTSMs used by your class. In addition, there is an analysis of the test according to the cognitive levels described in the CAPS. You will also find this resource in Section E of this document.

Where the test is in the Learner's Book, you cannot use it as part of the formal assessment programme as learners will be able to prepare for it in advance. It can, however, be used for practice and for informal assessment. Where this is the case, you will need to use a test from a Teacher's Guide from a different set of LTSMs, or set your own, or make use of the test in the tracker, mentioned above. We recommend that your learners write the test in Weeks 8 or 9.

A suggested mark record sheet is provided for you in Section E Assessment Resources to copy and complete for all the learners in your class. This allows you to record the marks of the formal assessment that you carry out in the term. You may prefer to use your own mark sheet created using your class list. In addition to the prescribed formal assessment, you should also include some informal assessments to help you and the learners gain insight into how they are progressing. Although marks do not have to be recorded for such assessments, you might like to record some marks that are awarded or key comments for your own interest. If your Learner's Book has the two informal assessments specified in the CAPS, these are indicated in the tracker.

In addition to the formal assessments specified in the CAPS, you should of course also assess your leaners informally. Informal assessment is an essential part of teaching and learning as it provides feedback to learners and informs planning for teaching. While informal assessment marks need not be recorded, some informal assessments, such as class written tests, after completion of a section of work, should be marked. In order to reduce your workload, learners can mark their own work (self-assessment) using a pencil or the learners can mark each other's work (peer marking). The tracker does not indicate which activities should be used for informal assessment – you should use your own discretion in this regard.

9. Resources

Several of the published Learner's Books and Teacher's Guides provide printable resources that you could copy for the learners' use with the lessons in that book.

In addition, a number of actual printable resources, as well as useful information about them, are provided in two books that are part of the Jika iMfundo maths toolkit for the

Teacher Toolkit: CAPS Planner and Tracker 2021 Term 1 5

Intermediate Phase and Grade 7. These are:

- Mental Maths Activities and Printable Resources
- Remediation and Enrichment Activities

You should review both books carefully to see how you might make best use of them. Although the remediation and enrichment activities are based on work done in grades before Grade 7, learners in Grade 7 who did not fully grasp certain concepts in previous years will benefit from these activities. There are Mental Maths activities that are suitable for learners in all the grades from 4 to 7, and many of the printable resources will also be useful in Grade 7.

Teachers for Grades 4-7 will receive these books once. They will not be redistributed each year as the trackers are.

Section E of the tracker has resources for assessment as discussed in Point 7 above.

B. LESSON PREPARATION KEY STEPS

The tracker provides a detailed programme to guide you through the daily content you need to teach to your class, and when to do formal assessments. You are still required to draw up your own lesson plans. You will still make the final professional choices about which examples and explanations to give, which activities to set for your class and how to manage your class on a daily basis.

It is a good idea that you agree with your Mathematics colleagues on a day that you can get together to plan your lessons as a group and submit your plans to your head of department for quality assurance. To deliver the lessons successfully **you must do the necessary preparation yourself**. Bear in mind that your lessons will not succeed if you have not prepared properly for them. This entails a number of key steps, such as those noted below.

- Review the term focus: Start by looking at the CAPS and orientating yourself to
 the CAPS content focus for the term. It is important that you are clear about the
 content focus as this will frame everything you do in your Mathematics lessons during
 the term.
- Prepare resources: The resources needed for each lesson are listed at the start of
 each CAPS topic or for each lesson in the trackers. It is very important that you check
 what is required for each lesson ahead of time so that you have all your

resources ready for use every day, e.g. counters, number boards, paper cut-outs, examples of shapes, etc.

- If you do not have all the necessary resources readily available, see how best you can improvise, e.g. ask learners to collect bottle tops or small stones to be used for counting or make your own flard cards/number boards using pieces of cardboard and a marker pen.
- Collect necessary items from home (e.g. bottles, bottle tops, etc.) long in advance so that you have all the necessary resources for your lesson.
- Use newspapers and magazines to cut out pictures that could be used in your teaching. If you have access to the internet, use Google to search for and print out pictures that you may need to use as illustrations in your lessons.
- Also make sure you have chalk or marking pens so that you can use your chalk or whiteboard as needed. If you have digital resources, check that they are in working order.
- Check the assessment programme so you can prepare any resources such as test papers needed for formal assessment so that leaners can settle down and begin working promptly.
- 3. Prepare the content: Think carefully about what it is that you will teach your learners in this lesson. Think about the prior knowledge of the content that learners should have learned in earlier grades that will be built on in this lesson. You should refer to the CAPS content and skills clarification column for further guidance while you prepare. Consider any common misconceptions, and how you will address these. Do you have any learners with learning barriers in the class and how will you accommodate them?
 - **Prepare a short introduction** to the topic so that you can explain it in simple terms to your learners. The Learner's Book and Teacher's Guide will assist you. Think also about how learners will develop an understanding of the main concepts of the lesson topic. You need to think about how to explain new Mathematics content and skills to your learners.
 - Make sure you have prepared for the teaching of the concepts before you teach. Prepare yourself to assist learners with any questions they might have during the lesson. Look at the activities in the Learner's Book and in the DBE workbook, and think about how best to help your learners engage with them. Consider what will be done in class and what at home. Be sure to have some enrichment and remediation activities ready to use as needed. The Teacher's Guides offer suggestions for remediation and enrichment activities that you might want to use.

(

- Consider the needs of any learners with barriers to learning in your class, and how best you can support them. The DBE has published some excellent materials to support you in working with learners with learning barriers. Two such publications are:
 - Directorate Inclusive Education, Department of Basic Education (2011)
 Guidelines for Responding to Learner Diversity in the Classroom Through
 Curriculum and Assessment Policy Statements. Pretoria.
 www.education.gov.za, www.thutong.doe.gov.za/InclusiveEducation
 - Directorate Inclusive Education, Department of Basic Education (2010)
 Guidelines for Inclusive Teaching and Learning. Education White Paper
 Special needs education: Building an inclusive education and training system. Pretoria. www.education.gov.za,
 www.thutong.doe.gov.za/InclusiveEducation
- You will also find helpful information and resources in the Remediation and Enrichment Activities book.
- 4. Plan the steps in your lesson and think carefully about how much time to allocate to different learner activities. Also think about how to organise the learners when they work. Most lessons should include the steps below and we have suggested the time to be spent on each but you might find that you need to work differently in some lessons, such as when a test is being written.

Step 1: Mental Mathematics (5–10 minutes): This is the start-up activity for each lesson and should not take more than 5 to 10 minutes. A programme of mental calculation strategy games can be found in Section F of this document to assist you whilst planning and preparing for teaching.

Mental calculations should be used to practice concepts and skills developed through the main lesson, sometimes with smaller number ranges. Learners should not be asked to do random calculations each day (CAPS p. 39). Rather, mental calculations should be used as an opportunity to consolidate three aspects of learners' number knowledge:

- 1. Number facts
- 1.1 Number bonds
- 1.2 Times tables
- 2. Calculation techniques
- 2.1 Doubling and halving, using multiplication to do division, multiplying and dividing by 10, 100, 1 000

- 2.2 Multiplying by multiples of 10, 100, 1 000
- 2.3 Building up and breaking down numbers, rounding off and compensating, etc.

3. Number concept

- 3.1 Counting, ordering and comparing, place value, odd and even numbers, multiples and factors
- 3.2 Properties of numbers (Identity elements for addition and multiplication;
- 3.3 Commutative and associative property for addition and multiplication;
- 3.4 Inverse operation for multiplication and division; inverse

Learners should not use concrete material to work out the answers in mental Mathematics. If learners need to, let them use their fingers as a concrete aid, but make a note of which learners are doing this and then spend time with them during remediation to help them with the basic skills.

Mental Mathematics skills improve hugely through repeated activity and enable learners to perform higher level tasks with greater ease.

Helping learners develop a range of Mental Mathematics strategies

Learners will be at different stages in terms of number facts that they have committed to memory and the strategies available to them for figuring out other facts. It is important for you to be aware of a range of Mental Mathematics strategies so that:

- When learners are carrying out mental calculations, you will be in a better position to recognise the strategy being used
- You can draw attention to and model a variety of strategies used by learners in the class
- You can make suggestions to learners that will move them on to more efficient strategies.

There are THREE aspects to ensuring that learners become effective in drawing on and using these strategies:

- Raising learners awareness of the range of strategies
- Developing their confidence and fluency with a range of strategies
- Helping them to choose from the range the most efficient method for a given calculation.
- Please refer to the *Mental Maths Activities and Printable Resources* book for ideas to supplement those in the LTSMs.

Step 2: Homework review/reflection (10 minutes): This is the second activity of the lesson. We recommend that you take about 10 minutes (not more) to

Teacher Toolkit: CAPS Planner and Tracker 2021 Term 1 7

10/16/2021 12:05:05 PM

remediate and correct the previous day's homework. Read out answers to all of the homework questions. Make sure that you mark the homework activities – use peer and individual marking and check homework yourself as often as you can. If peer or individual marking has been done, you should regularly sample some learners' books to moderate this marking. Choose one or two activities that you realise were problematic to go over more thoroughly. During this part of the lesson you may reflect on the previous day's work. Allow learners the opportunity to write corrections as needed.

Step 3: Lesson content – concept development (20 minutes): This is the third activity of the lesson. We recommend that you should actively teach your class for 20 minutes – going through examples interactively with your learners. Worked examples and suggested explanations are given in the learner Learner's Book or Teacher's Guide that you should go through with your class as a whole. The CAPS content clarification column would also be a useful reference should you need further examples or ideas to enrich your explanations. You should elaborate on these explanations and provide additional examples if necessary.

Step 4. Classwork activity (15 minutes): This is the fourth activity of the lesson. This part of the lesson provides an opportunity for learners to consolidate new concepts by doing activities or exercises from the Learner's Book or DBE workbook. These activities allow them to practice their maths and problem solving skills. It is important that you *prepare yourself for the class work activity*

– you need to assist learners as they do the classwork. You might also need to select particular questions from each activity for the classwork so that learners can manage the selection – the **exercises given in the various Learner's Books vary greatly in length** and you need to make this selection in advance (ensuring that all types of activities or concepts are covered each day) so that you can give quick and clear instructions to your leaners about which numbers of each exercise they should do.

Depending on your learners and the activities, you could go over one or two of the classwork activities orally with the whole class before allowing the learners to work independently. Allow the learners opportunities to do these activities alone, in pairs, and in groups, so that they experience working alone as well as with their peers. Remember not to give your learners more work than you are able to control and mark. Look out for the * linked to an exercise or activity which is too long and choose which numbers you want your learners to complete. Also encourage them,

where appropriate, to write their answers and to show their working neatly and systematically in their workbooks. Plan the timing of the lesson so that you and the learners can go over the classwork together and they can do corrections in the lesson.

If you require your learners to work in groups, carefully assign learners to groups in such a way that there are learners with mixed abilities who can assist each other in each group.

This is also the part of the lesson where you can assist learners who need extra support and extend those who need enrichment. Throughout the lesson, try to identify learners that need additional support or extension by paying attention to how well they cope with the mental Mathematics activities, how they managed the homework, how they respond when you develop the new content, and how they cope with the class activities. While the rest of the class is busy working through the classwork activities, you should spend some time with those learners who need extra support and help them to work through appropriate remediation activities. If learners successfully complete the daily classwork activities ahead of the rest of the class, be prepared to give them enrichment activities to do.

Step 5: Allocate homework (5 minutes): This is the fifth and final activity of the lesson. In this step you should tell the learners about the homework for the day and make sure they know what is expected of them and understand what it is that they have to do.

For homework, you can select a few questions from the daily classwork in their Learner's Book and ask the learners to complete them at home or ask them to do part or all of a DBE worksheet. Homework enables the learners to consolidate the Mathematics that you have taught them in class. It also promotes learner writing and development of mathematical knowledge, and the development of regular study habits. Encourage your learners to show their parent(s) or their guardian(s) the work they have done. When you can, take in homework books to check the work, and always allow some time to go through the homework with the learners to check that the work has been understood.

Step 6. After each lesson, reflect on how it went: Each week there is a reminder to you that you should note your thoughts about the day's lesson. You will use these notes as you plan and prepare for your teaching and in discussion with your colleagues.

C. FORMAL ASSESSMENT TERM PLAN

Formal assessment tasks are marked and formally recorded for promotion purposes. In Term 1 a test and an assignment are specified by the CAPS (p.155) for formal assessment. Table 1 below shows the formal assessment tasks that are provided in each set of LTSMs, and where they fit into the work for the term. In addition to these, as noted before, an exemplar test is provided in Section E Assessment Resources for you to use instead of the test provided in your chosen LTSMs. The exemplar test has been carefully designed and is in line with the CAPS policy requirements.

| Та | ble 1: Formal Assessment Tasks included in each | set of LTSMs for Term 1 |

Teacher Toolkit: CAPS Planner and Tracker 2021 Term 1 9

D. TRACKERS FOR EACH SET OF APPROVED LTSMs

1. Clever: Keeping Mathematics Simple

This section maps out how you should use your school's selected Teacher's Guide and Learner's Book in a way that enables you to cover the curriculum sequentially, aligning with the CAPS, for well-paced and meaningful teaching.

The following components are provided in the columns of the tracker table:

- 1. Day/lesson number.
- 2. CAPS page numbers and content linked to Learner's Book content.
- 3. Learner's Book exercises/activities that cover the CAPS content for the day.
- 4. Page reference in the Learner's Book (LB page reference).
- 5. Page reference in your Teacher's Guide for the day's activities (TG page reference).
- DBE workbook link to related content (worksheet and page numbers are referenced).
- 7. Date completed (complete this daily).

Weekly reflection

The tracker gives you space to reflect on your Mathematics lessons on a weekly basis. You can share this reflection with your HOD and discuss things that worked or did not go so well in your lesson. Together with your HOD you can think of ways of improving on the daily work that the learners in your class are doing. When you reflect you could think about things such as:

• Was your preparation for the lesson adequate? For instance, did you have all the necessary resources, had you thought through the content so that you understood it fully and so could teach it effectively?

- Did the purpose of the lesson succeed? For instance, did the learners reach
 a good understanding of the key concepts for the day? Could they use
 the language expected from them? Could they write what was expected
 from them?
- Did the learners cope with the work set for the day? For instance, did they finish the classwork? Was their classwork done adequately? Did you assign the homework?
- Are your learners' books up to date?
- Does what the learners have done in their books correlate with the tracked comments in the tracker?

Briefly write down your reflection weekly, following the prompts in the tracker.

- What went well?
- What did not go well?
- What did the learners find difficult or easy to understand or do?
- What will you do to support or extend learners?
- Did you complete all the work set for the week?
- If not, how will you get back on track?
- What will you change for next time? Why?

The reflection should be based on the daily lessons you have taught each week. It will provide you with a record for the next time you implement the same lesson again, and also forms the basis for collegial conversations with your head of department and your peers.

Think about and make a note of: What went well? What did not go well? What did the formal assessment tell you about learners' strengths and weaknesses? Were you able to remediate and extend their learning abilities? How will this analysis and the results inform your teaching and classroom practices and guide future planning for Term 1? How well did you adhere to the tracker this term? Were there any topics you did not complete? If so, how could you avoid this next time? What will you do to get back on track?

2. Mathematics Today

This section maps out how you should use your school's selected Teacher's Guide Learner's Book in a way that enables you to cover the curriculum sequentially, aligning with the CAPS, for well-paced and meaningful teaching.

The following components are provided in the columns of the tracker table:

- 1. Day/lesson number.
- 2. CAPS page numbers and content linked to Learner's Book content.
- 3. Learner's Book exercises/activities that cover the CAPS content for the day.
- 4. Page reference in the Learner's Book (LB page reference).
- 5. Page reference in your Teacher's Guide for the day's activities (TG page reference).
- DBE workbook link to related content (worksheet and page numbers are referenced).
- 7. Date completed (complete this daily).

Weekly reflection

Gr 7 Maths Tracker Term 1 2021 p112 KZN.indd 1

The tracker gives you space to reflect on your Mathematics lessons on a weekly basis. You can share this reflection with your HOD and discuss things that worked or did not go so well in your lesson. Together with your HOD you can think of ways of improving on the daily work that the learners in your class are doing. When you reflect you could think about things such as:

• Was your preparation for the lesson adequate? For instance, did you have all the necessary resources, had you thought through the content so that you understood it fully and so could teach it effectively?

- Did the purpose of the lesson succeed? For instance, did the learners reach
 a good understanding of the key concepts for the day? Could they use
 the language expected from them? Could they write what was expected
 from them?
- Did the learners cope with the work set for the day? For instance, did they finish the classwork? Was their classwork done adequately? Did you assign the homework?
- Are your learners' books up to date?
- Does what the learners have done in their books correlate with the tracked comments in the tracker?

Briefly write down your reflection weekly, following the prompts in the tracker.

- What went well?
- What did not go well?
- What did the learners find difficult or easy to understand or do?
- What will you do to support or extend learners?
- Did you complete all the work set for the week?
- If not, how will you get back on track?
- What will you change for next time? Why?

The reflection should be based on the daily lessons you have taught each week. It will provide you with a record for the next time you implement the same lesson again, and also forms the basis for collegial conversations with your head of department and your peers.

Teacher Toolkit: CAPS Planner and Tracker 2021 Term 1 31

3. Oxford Headstart Mathematics

This section maps out how you should use your school's selected Teacher's Guide and Learner's Book in a way that enables you to cover the curriculum sequentially, aligning with the CAPS, for well-paced and meaningful teaching.

The following components are provided in the columns of the tracker table:

- 1. Day/lesson number.
- 2. CAPS page numbers and content linked to Learner's Book content.
- 3. Learner's Book exercises/activities that cover the CAPS content for the day.
- 4. Page reference in the Learner's Book (LB page reference).
- 5. Page reference in your Teacher's Guide for the day's activities (TG page reference).
- 6. DBE workbook link to related content (worksheet and page numbers are referenced).
- 7. Date completed (complete this daily).

Weekly reflection

The tracker gives you space to reflect on your Mathematics lessons on a weekly basis. You can share this reflection with your HOD and discuss things that worked or did not go so well in your lesson. Together with your HOD you can think of ways of improving on the daily work that the learners in your class are doing. When you reflect you could think about things such as:

Was your preparation for the lesson adequate? For instance, did you have all
the necessary resources, had you thought through the content so that you
understood it fully and so could teach it effectively?

- Did the purpose of the lesson succeed? For instance, did the learners reach
 a good understanding of the key concepts for the day? Could they use
 the language expected from them? Could they write what was expected
 from them?
- Did the learners cope with the work set for the day? For instance, did they finish the classwork? Was their classwork done adequately? Did you assign the homework?
- Are your learners' books up to date?
- Does what the learners have done in their books correlate with the tracked comments in the tracker?

Briefly write down your reflection weekly, following the prompts in the tracker.

- What went well?
- What did not go well?
- What did the learners find difficult or easy to understand or do?
- What will you do to support or extend learners?
- Did you complete all the work set for the week?
- If not, how will you get back on track?
- What will you change for next time? Why?

The reflection should be based on the daily lessons you have taught each week. It will provide you with a record for the next time you implement the same lesson again, and also forms the basis for collegial conversations with your head of department and your peers.

Weekly reflection

The tracker gives you space to reflect on your Mathematics lessons on a weekly basis. You can share this reflection with your HOD and discuss things that worked or did not go so well in your lesson. Together with your HOD you can think of ways of improving on the daily work that the learners in your class are doing. When you reflect you could think about things such as:

Was your preparation for the lesson adequate? For instance, did you have all
the necessary resources, had you thought through the content so that you
understood it fully and so could teach it effectively?

- Did the purpose of the lesson succeed? For instance, did the learners reach
 a good understanding of the key concepts for the day? Could they use
 the language expected from them? Could they write what was expected
 from them?
- Did the learners cope with the work set for the day? For instance, did they finish the classwork? Was their classwork done adequately? Did you assign the homework?
- Are your learners' books up to date?
- Does what the learners have done in their books correlate with the tracked comments in the tracker?

Briefly write down your reflection weekly, following the prompts in the tracker.

- What went well?
- What did not go well?
- What did the learners find difficult or easy to understand or do?
- What will you do to support or extend learners?
- Did you complete all the work set for the week?
- If not, how will you get back on track?
- What will you change for next time? Why?

The reflection should be based on the daily lessons you have taught each week. It will provide you with a record for the next time you implement the same lesson again, and also forms the basis for collegial conversations with your head of department and your peers.

5. Platinum Mathematics

This section maps out how you should use your school's selected Teacher's Guide and Learner's Book in a way that enables you to cover the curriculum sequentially, aligning with the CAPS, for well-paced and meaningful teaching.

The following components are provided in the columns of the tracker table:

- 1. Day/lesson number.
- 2. CAPS page numbers and content linked to Learner's Book content.
- 3. Learner's Book exercises/activities that cover the CAPS content for the day.
- 4. Page reference in the Learner's Book (LB page reference).
- 5. Page reference in your Teacher's Guide for the day's activities (TG page reference).
- DBE workbook link to related content (worksheet and page numbers are referenced).
- 7. Date completed (complete this daily).

Weekly reflection

The tracker gives you space to reflect on your Mathematics lessons on a weekly basis. You can share this reflection with your HOD and discuss things that worked or did not go so well in your lesson. Together with your HOD you can think of ways of improving on the daily work that the learners in your class are doing. When you reflect you could think about things such as:

Was your preparation for the lesson adequate? For instance, did you have all
the necessary resources, had you thought through the content so that you
understood it fully and so could teach it effectively?

- Did the purpose of the lesson succeed? For instance, did the learners reach
 a good understanding of the key concepts for the day? Could they use
 the language expected from them? Could they write what was expected
 from them?
- Did the learners cope with the work set for the day? For instance, did they finish the classwork? Was their classwork done adequately? Did you assign the homework?
- Are your learners' books up to date?
- Does what the learners have done in their books correlate with the tracked comments in the tracker?

Briefly write down your reflection weekly, following the prompts in the tracker.

- What went well?
- What did not go well?
- What did the learners find difficult or easy to understand or do?
- What will you do to support or extend learners?
- Did you complete all the work set for the week?
- If not, how will you get back on track?
- What will you change for next time? Why?

The reflection should be based on the daily lessons you have taught each week. It will provide you with a record for the next time you implement the same lesson again, and also forms the basis for collegial conversations with your head of department and your peers.

It strategy can you put in place for them to catch up with the class? Which lears would benefit from extension activities? What can you do to help them? If which specific topics did the learners struggle the most? How can you adjust teaching to improve their understanding of this section of the curriculum is future? | 4. Did you are the | | ne content a | as prescribed by the CAPS t work on these topics in fut | | | |
| HOD: | | | | | Date: | | | |

6. Premier Mathematics

This section maps out how you should use your school's selected Teacher's Guide and Learner's Book in a way that enables you to cover the curriculum sequentially, aligning with the CAPS, for well-paced and meaningful teaching.

The following components are provided in the columns of the tracker table:

- 1. Day/lesson number.
- 2. CAPS page numbers and content linked to Learner's Book content.
- 3. Learner's Book exercises/activities that cover the CAPS content for the day.
- 4. Page reference in the Learner's Book (LB page reference).
- 5. Page reference in your Teacher's Guide for the day's activities (TG page reference).
- DBE workbook link to related content (worksheet and page numbers are referenced).
- 7. Date completed (complete this daily).

Weekly reflection

The tracker gives you space to reflect on your Mathematics lessons on a weekly basis. You can share this reflection with your HOD and discuss things that worked or did not go so well in your lesson. Together with your HOD you can think of ways of improving on the daily work that the learners in your class are doing. When you reflect you could think about things such as:

Was your preparation for the lesson adequate? For instance, did you have all
the necessary resources, had you thought through the content so that you
understood it fully and so could teach it effectively?

- Did the purpose of the lesson succeed? For instance, did the learners reach
 a good understanding of the key concepts for the day? Could they use
 the language expected from them? Could they write what was expected
 from them?
- Did the learners cope with the work set for the day? For instance, did they finish the classwork? Was their classwork done adequately? Did you assign the homework?
- Are your learners' books up to date?
- Does what the learners have done in their books correlate with the tracked comments in the tracker?

Briefly write down your reflection weekly, following the prompts in the tracker.

- What went well?
- What did not go well?
- What did the learners find difficult or easy to understand or do?
- What will you do to support or extend learners?
- Did you complete all the work set for the week?
- If not, how will you get back on track?
- What will you change for next time? Why?

The reflection should be based on the daily lessons you have taught each week. It will provide you with a record for the next time you implement the same lesson again, and also forms the basis for collegial conversations with your head of department and your peers.

7. Solutions for All Mathematics

This section maps out how you should use your school's selected Teacher's Guide and Learner's Book in a way that enables you to cover the curriculum sequentially, aligning with the CAPS, for well-paced and meaningful teaching.

The following components are provided in the columns of the tracker table:

- 1. Day/lesson number.
- 2. CAPS page numbers and content linked to Learner's Book content.
- 3. Learner's Book exercises/activities that cover the CAPS content for the day.
- 4. Page reference in the Learner's Book (LB page reference).
- 5. Page reference in your Teacher's Guide for the day's activities (TG page reference).
- 6. DBE workbook link to related content (worksheet and page numbers are referenced).
- 7. Date completed (complete this daily).

Weekly reflection

The tracker gives you space to reflect on your Mathematics lessons on a weekly basis. You can share this reflection with your HOD and discuss things that worked or did not go so well in your lesson. Together with your HOD you can think of ways of improving on the daily work that the learners in your class are doing. When you reflect you could think about things such as:

Was your preparation for the lesson adequate? For instance, did you have all
the necessary resources, had you thought through the content so that you
understood it fully and so could teach it effectively?

- Did the purpose of the lesson succeed? For instance, did the learners reach
 a good understanding of the key concepts for the day? Could they use
 the language expected from them? Could they write what was expected
 from them?
- Did the learners cope with the work set for the day? For instance, did they finish the classwork? Was their classwork done adequately? Did you assign the homework?
- Are your learners' books up to date?
- Does what the learners have done in their books correlate with the tracked comments in the tracker?

Briefly write down your reflection weekly, following the prompts in the tracker.

- What went well?
- What did not go well?
- What did the learners find difficult or easy to understand or do?
- What will you do to support or extend learners?
- Did you complete all the work set for the week?
- If not, how will you get back on track?
- What will you change for next time? Why?

The reflection should be based on the daily lessons you have taught each week. It will provide you with a record for the next time you implement the same lesson again, and also forms the basis for collegial conversations with your head of department and your peers.

8. Spot On Mathematics

This section maps out how you should use your school's selected Teacher's Guide and Learner's Book in a way that enables you to cover the curriculum sequentially, aligning with the CAPS, for well-paced and meaningful teaching.

The following components are provided in the columns of the tracker table:

- 1. Day/lesson number.
- 2. CAPS page numbers and content linked to Learner's Book content.
- 3. Learner's Book exercises/activities that cover the CAPS content for the day.
- 4. Page reference in the Learner's Book (LB page reference).
- 5. Page reference in your Teacher's Guide for the day's activities (TG page reference).
- DBE workbook link to related content (worksheet and page numbers are referenced).
- 7. Date completed (complete this daily).

Weekly reflection

The tracker gives you space to reflect on your Mathematics lessons on a weekly basis. You can share this reflection with your HOD and discuss things that worked or did not go so well in your lesson. Together with your HOD you can think of ways of improving on the daily work that the learners in your class are doing. When you reflect you could think about things such as:

Was your preparation for the lesson adequate? For instance, did you have all
the necessary resources, had you thought through the content so that you
understood it fully and so could teach it effectively?

- Did the purpose of the lesson succeed? For instance, did the learners reach
 a good understanding of the key concepts for the day? Could they use
 the language expected from them? Could they write what was expected
 from them?
- Did the learners cope with the work set for the day? For instance, did they finish the classwork? Was their classwork done adequately? Did you assign the homework?
- Are your learners' books up to date?
- Does what the learners have done in their books correlate with the tracked comments in the tracker?

Briefly write down your reflection weekly, following the prompts in the tracker.

- What went well?
- What did not go well?
- What did the learners find difficult or easy to understand or do?
- What will you do to support or extend learners?
- Did you complete all the work set for the week?
- If not, how will you get back on track?
- What will you change for next time? Why?

The reflection should be based on the daily lessons you have taught each week. It will provide you with a record for the next time you implement the same lesson again, and also forms the basis for collegial conversations with your head of department and your peers.

______ (2)

8. 1, 2, 4, 16 and 32 are 5 of the 6 factors of 32. Write down the missing factor.

_____ (1)

9. List two whole numbers that I can multiply to get to 125?

______(2)

10. Find the Lowest Common Multiple of 12 and 36.

_____(4)

11. Write down the factors of 57 which lie between 1 and 57

______ (2)

PRIME NUMBERS (5 marks)

12. List all the prime numbers between 27 and 35.

_____(2)

13. Write down all the even numbers less than 100 that are prime numbers.

_____ (1)

14. From these numbers: 5; 33; 27; 72; 36; 61; 81; 45; choose:

a) A prime number

______(1)

b) A number which is the product of two prime numbers

______(1)

RATIO AND RATE (4 marks)

18. (Show ALL calculations)

18.1 A normal, healthy adult heart beats about 78 beats per minute. How many times will a heart beat in half an hour?

18.2 Lionel works for 40 minutes at his homework. Cindy works for 2 hours at herhomework.

**Lionel says*: The ratio of our times is 40 : 2. that is 20 : 1.

Cindy says: No! That ratio says that you worked much, much longer at your homework than I did. That is not true. I worked much longer than you did!

- a) Do you agree with Cindy? Or would you help Lionel understand what is wrong with what he said?(1) (1)
- b) What is the ratio of the times that they spent on their homework?

19. Complete the number sentence to make the following sentence true:

(2)

EXPONENTS (8 marks)

20.1. (a)
$$5^2 + 1^2 + 3^3 = (1)$$

(b)
$$6^2 - 3^2 = (1)$$

(c)
$$4^3 \div \sqrt{64} =$$
 (2)

20.2. First estimate and then calculate and simplify the answers: (Show ALL your calculations)

Example: $5^3 + 3^3 = 125 + 27 = 152$

a.
$$1^3 + 5^3 =$$

b.
$$3^3 - 2^3 =$$

3. Analysis of Cognitive Levels of Test

Table 1. WEIGHTING OF THE COGNITIVE LEVELS AS SPECIFIED BY THE CAPS FOR TESTS AND EXAMINATIONS FOR SENIOR PHASE

| LEVELS | VERBS | SAMPLE TASKS | CAPS WEIGHTING |
|---|---|---|-------------------|
| KNOWLEDGE Learn terms, facts, methods, procedures, concepts | Draw, Recognise, Count, Group, Reproduce, Memorise, State, Tabulate, Identify, Point, Follow Directions, Arrange | Can you identify the different place values in the metric system? State the mode, mean, median, and range from your set of data. How do you reproduce a circle using a compass? Arrange the following in descending order. | 25 % |
| COMPREHENSION Understand uses and implications of terms, facts, methods, procedures, concepts | Change, Classify, Convert, Estimate, Interpret, Measure, Put in Order, Show, Suggest, Express in other terms | Classify polygons by regularity, concavity, and line symmetry. Explain how to convert between fractions, decimals, and percentages. What is your interpretation of the data expressed on the graph? | |
| ROUTINE PROCEDURES APPLICATION Practice theory, solve problems, use information in the new situations | Calculate, Compute, Construct, Demonstrate, Derive, Graph, Manipulate, Operate, Practice, Prove, Solve, Find | How do you calculate the percent of a given whole? Solve for area of a rectangle by using A = I x w What information do you consider when graphing data derived from a survey? Find the value of | 45% |
| COMPLEX PROCEDURES ANALYSIS Analyse structure, recognise assumptions, breaking down material into parts | Break down, Deduce, Diagram, Distinguish, Formulate, Group, Order, Separate, Simplify, Sort | What methods can be used to compare and orderfractions? Analyse the relationship between variables on a graph. What factors do you consider when | 20% |
