

To: Teachers and parents

Topic: Term 2 revision work

Message Objective(s): To enable learners to revise key basic concepts and skills covered during the term to close gaps identified and deepen concept understanding

Message:

It is holiday time when learners are at home. It is encouraged that learners focus more on key concepts and skills that require constant practice. Parents should assist and ensure that learners work more on the following skills which cascade into other topics.

Intermediate phase should practice work on addition, subtraction, multiplication and division of numbers using a variety of techniques as prescribe by CAPS Policy document. Items including solving problems in context must also be included so that it learners relate questions in real life situations and put them into application. Senior Phase should work on calculations involving decimals, integers, and algebra. Practice questions can be obtained from planners and tracker of respective grades on the NECT website cited below.

Parents have the responsibility to develop a revision time- table for their children so that more daily home practice activities are conducted, and they should monitor that daily work is covered without fail with the support of subject teachers.
