

To: FET Mathematics SAs, teachers and learners

Topic: The power of believing in yourself

Message Objective(s):

1. To improve learner confidence during and after exams
2. To improve pass rates at FET mathematics

Message:

I wish you all the best as you are writing your trial exams this and next week. All the best. We were taught and learnt something and now is the time to shine and show how far we understood.

The following are my words of encouragement:

1. Believe in yourself, self-confidence moves mountains.
2. Always aim higher than you did last time.
3. Find a time to exercise and refresh, it is a healthy thing to do for your mind and soul.
4. When exam results are out; reflect on them: If good then aim higher next time; if bad don't worry - lift yourself up, it's a signal that you need to do more in those questions or topics.
5. During the holiday keep on studying and preparing for your final exams through joining study groups and watching programs like Woza Matrics and Tswelopele.

Do not compare yourself to someone who did not make it last year. You are unique and studying during a unique space. This is your time to shine. You will make it!
