

To: FET Mathematics SAs, Parents, Teachers & learners

Topic: Final Examination Preparations Part 1

Message Objective(s):

1. To improve pass rates at FET Mathematics
2. To enable teachers and learners to prepare an effective study time table

Term 3 has come and gone! Term 4 is spared for revision and examinations this year. We need to plan and prepare ourselves for excelling in the upcoming examinations. Parents and teachers should keep motivating the learners, saying positive about learner efforts and be always there for their needs and provide for their needs.

Paper weighting will enable us to allocate study time accordingly.

Paper 1 (150): Algebraic expressions, equations and inequalities (25 marks), Number patterns (25), Functions and graphs (35), Finance and growth (15) Differential calculus (35) and Counting principles & probability (15)

Paper 2 (150): Euclidean Geometry (40 marks), Analytical geometry (40), Trigonometry (50) and Statistics (20).

Learners and teachers should ensure that the study timetable is balanced and prepared according to the mark weightings. This will guard them against a trap of spending more time on topics with few marks.

I hope that learners have joined the Woza Matrics & Tswelopele 2021 campaigns through visiting different platforms at their disposal for study. Also read about 10 ways to improve your Maths mark by Hannah Meidment and get encouraged.
