Whole Numbers: Number operations

Teachers and parents should encourage learners to practice more activities on calculation techniques focussing on the following Mathematics skills: correct number representation, different techniques of addition, subtraction, multiplication and division. These may include but not limited to:

- estimation
- multiplying in columns
- building up and breaking down numbers
- doubling and halving
- using multiplication and division as inverse operations
- division as inverse operations
- using a calculator

Use of varied resources for practice is recommended.
