

To: FET Mathematics Subject Advisors, Parents, Teachers and Learners

Topic: A time to reflect and plan for the year

Message Objective(s):

1. To improve pass rates at FET Mathematics
2. To enable teachers, parents, and learners to prepare themselves for this academic year.

Welcome to 2022 academic year. We say congratulations to the 2021 class, teachers and parents for producing such quality results.

The baton stick has been handed back to us to complete the race. It is imperative that we learn and reflect on how this 2021 class managed to sail through despite Covid-10 challenges. One lesson we got from them is...it can be done! They showed a lot of resilience.

From Grade 10-12 we say the time to start preparations is now. Let us form WhatsApp groups and support each other through them. Let us take advantages of watching extra lessons on TV and other digital platforms. Exercise and always observe Covid protocols to stay healthy.

The Covid pandemic has taught us to be prepared for any eventualities. We are required to adapt to new learning styles as they emerge.

To our teachers, let us plan for extra work and ensure our learners are on task whether at school and at home. In Mathematics, practice makes perfect.

To our parents, we thank you for your support last year and we still appeal for more of the same this year.

I wish you a successful 2022 Mathematics academic year!

From: Itai Makuyana
